### AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

#### Listing of the Claims

1. (Currently Amended) A joint prosthesis system for joining a first bone having a first surface to a second bone having a second surface, comprising:  
    at least one bioabsorbable polymeric spacer adapted to be interposed in a joint cavity between the first and second bone ~~between the first surface and the second surface~~; and  
    at least one connector adapted to be fixedly attached to the first bone and the second bone, at least a portion of the at least one connector restricting the lateral movement of said at least one bioabsorbable polymeric spacer by contacting the outer surface of the at least one bioabsorbable polymeric spacer without penetrating the outer surface of the at least one bioabsorbable polymeric spacer, the at least one connector comprising autogenous soft or fibrous tissue.
2. (Previously Presented) The joint prosthesis system as set forth in claim 1, wherein said at least one bioabsorbable polymeric spacer is cylindrical.
3. (Previously Presented) The joint prosthesis system as set forth in claim 1, wherein said at least one bioabsorbable polymeric spacer has a porosity of about 50  $\mu\text{m}$  to 1000  $\mu\text{m}$ .
4. (Previously Presented) The joint prosthesis system as set forth in claim 3, wherein said at least one bioabsorbable polymeric spacer comprises a bioabsorbable fabric wrapped to form a cylindrical body.
5. (Previously Presented) The joint prosthesis system as set forth in claim 4, wherein said at least one bioabsorbable polymeric spacer further comprises a bioabsorbable film that binds with said bioabsorbable fabric.

Appl. No. 09/988,777  
Reply to Office Action of April 5, 2006  
2880/351

6. (Previously Presented) The joint prosthesis system as set forth in claim 5, wherein said bioabsorbable film comprises bioactive components.

7. (Original) The joint prosthesis system as set forth in claim 4, wherein said bioabsorbable fabric is comprised of at least two compounds having different degradation rates in tissue.

8. (Previously Presented) The joint prosthesis system as set forth in claim 4, wherein said bioabsorbable fabric is coated with a material having a degradation rate different than the degradation rate of the bioabsorbable fabric in tissue.

9. (Original) The joint prosthesis system as set forth in claim 7, wherein said bioabsorbable fabric comprises fibers, said fibers comprising a first polymer coated with a second polymer that degrades faster in tissue than said first polymer.

10. (Previously Presented) The joint prosthesis system as set forth in claim 1, wherein said at least one bioabsorbable polymeric spacer comprises a bioabsorbable fabric comprising bioabsorbable fibers having a thickness of about 1  $\mu\text{m}$  to 300  $\mu\text{m}$ .

11. (Previously Presented) The joint prosthesis system of claim 1, wherein said at least one bioabsorbable polymeric spacer comprises a bioactive agent.

12. (Withdrawn - Previously Presented) The joint prosthesis system as set forth in claim 1, wherein said at least one bioabsorbable polymeric spacer comprises a cavity.

13. (Withdrawn) The joint prosthesis system as set forth in claim 12, wherein the surface of said cavity has a coating comprising at least one bioactive agent.

14. (Withdrawn) The joint prosthesis system as set forth in claim 13, wherein said at least one bioactive agent is a bone growth promoting substance.

15. (Withdrawn) The joint prosthesis system as set forth in claim 13, wherein said at least one bioactive agent is hyaline cartilage cells.

Appl. No. 09/988,777  
Reply to Office Action of April 5, 2006  
2880/351

16. (Withdrawn - Previously Presented) The joint prosthesis system as set forth in claim 1, wherein the at least one bioabsorbable polymeric spacer comprises two bioabsorbable polymeric spacers.

17. (Withdrawn - Previously Presented) The joint prosthesis system as set forth in claim 16, wherein at least one of said two bioabsorbable polymeric spacers comprises a cavity.

18. (Withdrawn) The joint prosthesis system as set forth in claim 17, wherein the surface of said cavity has a coating comprising at least one bioactive agent.

19. (Withdrawn - Previously Presented) The joint prosthesis system as set forth in claim 17, wherein the surface of said cavity has a coating comprising hyaline cartilage cells.

20. (Withdrawn - Previously Presented) The joint prosthesis system as set forth in claim 1, wherein the at least one bioabsorbable polymeric spacer comprises two bioabsorbable polymeric spacers, each of said two bioabsorbable polymeric spacers having a first side adapted to contact a bone and having a second side adapted to contact the other one of said two bioabsorbable polymeric spacers.

21. (Withdrawn) The joint prosthesis system as set forth in claim 20, wherein the first side has a first coating comprising a bioactive agent to promote bone growth, and said second side has a second coating comprising a bioactive agent to promote cartilage growth.

22. (Cancelled)

23. (Currently Amended) A method of treating a joint injury comprising the steps of:  
providing at least one bioabsorbable polymeric spacer;  
interposing said at least one bioabsorbable polymeric spacer in a joint cavity  
between a first bone and a second bone;

Appl. No. 09/988,777  
Reply to Office Action of April 5, 2006  
2880/351

connecting said first bone to said second bone with at least one connector such that at least part of said at least one connector restricts the lateral movement of said at least one bioabsorbable polymeric spacer by contacting the outer surface of said at least one bioabsorbable polymeric spacer without penetrating the outer surface of the at least one bioabsorbable polymeric spacer, the at least one connector comprising autogenous soft or fibrous tissue.

24. (Previously Presented) The method of claim 23, wherein said at least one bioabsorbable polymeric spacer is cylindrical.

25. (Previously Presented) The method of claim 23, wherein said at least one bioabsorbable polymeric spacer has a porosity of about 50  $\mu\text{m}$  to 1000  $\mu\text{m}$ .

26. (Previously Presented) The method of claim 23, wherein said at least one bioabsorbable polymeric spacer comprises a bioabsorbable fabric wrapped to form a cylindrical body.

27. (Previously Presented) The method of claim 26, wherein said at least one bioabsorbable polymeric spacer further comprises a bioabsorbable film that binds with said bioabsorbable fabric.

28. (Original) The method of claim 27, wherein said bioabsorbable film includes bioactive components.

29. (Previously Presented) The method of claim 26, wherein said bioabsorbable fabric comprises at least two compounds having different degradation rates in tissue.

30. (Previously Presented) The method of claim 26, wherein said bioabsorbable fabric is coated with a material having a degradation rate different than the degradation rate of the bioabsorbable fabric in tissue.

Appl. No. 09/988,777  
Reply to Office Action of April 5, 2006  
2880/351

31. (Original) The method of claim 29, wherein said bioabsorbable fabric comprises fibers, said fibers comprising a first polymer coated with a second polymer that degrades faster in tissue than said first polymer.

32. (Previously Presented) The method of claim 23, wherein said at least one bioabsorbable polymeric spacer comprises a bioabsorbable fabric comprising bioabsorbable fibers having a thickness of about 1  $\mu\text{m}$  to 300  $\mu\text{m}$ .

33. (Withdrawn - Previously Presented) The method of claim 23, wherein said at least one bioabsorbable polymeric spacer comprises a cavity.

34. (Withdrawn - Previously Presented) The method of claim 23, wherein the at least one bioabsorbable polymeric spacer comprises first and second bioabsorbable polymeric spacers and wherein interposing said at least one bioabsorbable polymeric spacer comprises interposing the first bioabsorbable polymeric spacer between the first bone and the second bioabsorbable polymeric spacer, and interposing the second bioabsorbable polymeric spacer between the first bioabsorbable polymeric spacer and the second bone.

35. (Withdrawn - Previously Presented) The method of claim 34, wherein at least one of said first and second bioabsorbable polymeric spacers comprises a cavity.

36. (Withdrawn - Previously Presented) The joint prosthesis system of claim 16, wherein surfaces of the two bioabsorbable polymeric spacers mutually define a cavity.

37. (Withdrawn - Previously Presented) The method of claim 34, wherein surfaces of the two bioabsorbable polymeric spacers mutually define a cavity.

38. (Previously Presented) The joint prosthesis system as set forth in claim 1, wherein the at least one connector comprises two connectors.

39. (Previously Presented) The joint prosthesis system as set forth in claim 38, wherein the two connectors each comprise autogenous soft or fibrous tissue.
